PLANT AND SOIL

Contents Volume 280 Nos. 1–2 February 2006

Editorial
H. Lambers vii–viii

Commentary
Spatial variation of soil properties relating to vegetation changes
T.J. Sauer, C.A. Cambardella and D.W. Meek 1–5

Spatial variability of soil chemical properties of a prairie–forest transition in Louisiana
A. Bekele and W.H. Hudnall 7–21

Commentary
Resource-Ratio theory and the control of invasive plants
W.S. Harpole 23–27

Direct effects of soil amendments on field emergence and growth of the invasive annual grass *Bromus tectorum* L. and the native perennial grass *Hilaria jamesii* (Torr.) Benth
B.A. Newingham and J. Belnap 29–40

From flooded to aerobic conditions in rice cultivation: Consequences for zinc uptake
X. Gao, C. Zou, X. Fan, F. Zhang and E. Hoffland 41–47

Congeneric serpentine and nonserpentine shrubs differ more in leaf Ca:Mg than in tolerance of low N, low P, or heavy metals
R.E. O'Dell, J.J. James and J.H. Richards 49–64

Mechanical impedance and nutrient acquisition in rice
D.A. Brown, L.J. Clark, J.R. Howarth, S. Parmar and M.J. Hawkesford 65–76

Grazing and ecosystem carbon storage in the North American Great Plains
J.D. Derner, T.W. Boutton and D.D. Briske 77–90

Short-term uptake of ^{15}N by a grass and soil micro-organisms after long-term exposure to elevated CO_2
R. Barnard, L. Barthes and P.W. Leadley 91–99

Aggregative root placement: A feature during interspecific competition in inland sand-dune habitats
M. Bartelheimer, T. Steinlein and W. Beyschlag 101–114

Atrazine tolerance of grass species with potential for use in vegetated filters in Australia
V.H. Popov and P.S. Cornish 115–126

Role of light fraction soil organic matter in the phosphorus nutrition of *Eucalyptus globulus* seedlings
C.P. O'Hara, J. Bauhus and P.J. Smethurst 127–134

Nitrogenase inhibition in nodules from pea plants grown under salt stress occurs at the physiological level and can be alleviated by B and Ca
L. Bolaños, M. Martín, A. El-Hamdaoui, R. Rivilla and I. Bonilla **135–142**

Conventionally tilled and permanent raised beds with different crop residue management: Effects on soil C and N dynamics
B. Govaerts, K.D. Sayre, J.M. Ceballos-Ramirez, M.L. Luna-Guido, A. Limon-Ortega, J. Deckers and L. Dendooven **143–155**

Nature of the interference mechanism of sugarcane (*Saccharum officinarum* L.) straw
D.A. Sampietro and M.A. Vattuone **157–169**

Tomato growth in soil amended with sugar mill by-products compost
S. Meunchang, S. Panichsakpatana and R.W. Weaver **171–176**

The impact of nitrogen placement and tillage on NO, N_2O, CH_4 and CO_2 fluxes from a clay loam soil
X.J. Liu, A.R. Mosier, A.D. Halvorson and F.S. Zhang **177–188**

Legacy of land-use evident in soils of Western Australia's wheatbelt
R.J. Standish, V.A. Cramer, R.J. Hobbs and H.T. Kobryn **189–207**

^{1}H NMR relaxometry in natural humous soil samples: Insights in microbial effects on relaxation time distributions
F. Jaeger, E. Grohmann and G.E. Schaumann **209–222**

Active silicon uptake by wheat
D.W. Rains, E. Epstein, R. J. Zasoski and M. Aslam **223–228**

Accumulation of an aromatic amine, β-phenethylamine, in root nodules of adzuki bean *Vigna angularis*
S. Fujihara, J. Terakado and N. Nishibori **229–237**

Improved yield of micropropagated sugarcane following inoculation by endophytic *Burkholderia vietnamiensis*
M. Govindarajan, J. Balandreau, R. Muthukumarasamy, G. Revathi and C. Lakshminarasimhan **239–252**

Ara-rhizotron: An effective culture system to study simultaneously root and shoot development of *Arabidopsis*
F. Devienne-Barret, C. Richard-Molard, M. Chelle, O. Maury and B. Ney **253–266**

Effects of changing the supply of nitrogen and phosphorus on growth and interactions between *Eucalyptus globulus* and *Acacia mearnsii* in a pot trial
D.I. Forrester, A.L. Cowie, J. Bauhus, J.T. Wood and R.I. Forrester **267–277**

Does soil strength play a role in wheat yield losses caused by soil drying?
W.R. Whalley, L.J. Clark, D.J.G. Gowing, R.E. Cope, R.J. Lodge and P.B. Leeds-Harrison **279–290**

Nitrogen translocation in wheat plants under soil water deficit
Z.-Z. Xu, Z.-W. Yu and D. Wang **291–303**

Comparison of belowground biomass in C_3- and C_4-dominated mixed communities in a Chesapeake Bay brackish marsh
C.J. Saunders, J.P. Megonigal and J.F. Reynolds **305–322**

Transpiration of squash under a tropical maritime climate
M. van der Velde, S.R. Green, M. Vanclooster and B.E. Clothier **323–337**

Root CSA-root biomass prediction models in six tree species and improvement of models by inclusion of root architectural parameters
C.C.N. Nielsen and J.K. Hansen **339–356**

The effect of mixing prunings of two tropical shrub legumes (*Calliandra houstoniana* and *Indigofera zollingeriana*) with contrasting quality on N release in the soil and apparent N degradation in the rumen
K. Tscherning, C. Lascano, E. Barrios, R. Schultze-Kraft and M. Peters **357–368**

Phosphorus accretion in old leaves of a Mediterranean shrub growing at a phosphorus-rich site
R. Milla, S. Palacio-Blasco, M. Maestro-Martínez and G. Montserrat-Martí **369–372**

Natural diversity of nodular microsymbionts of *Alnus glutinosa* in the Tormes River basin
J.M. Igual, A.Valverde, E. Velázquez, I.S. Regina and C. Rodríguez-Barrueco **373–383**
